Development of Robotic Technology for Post-Stroke Home Tele-Rehabilitation

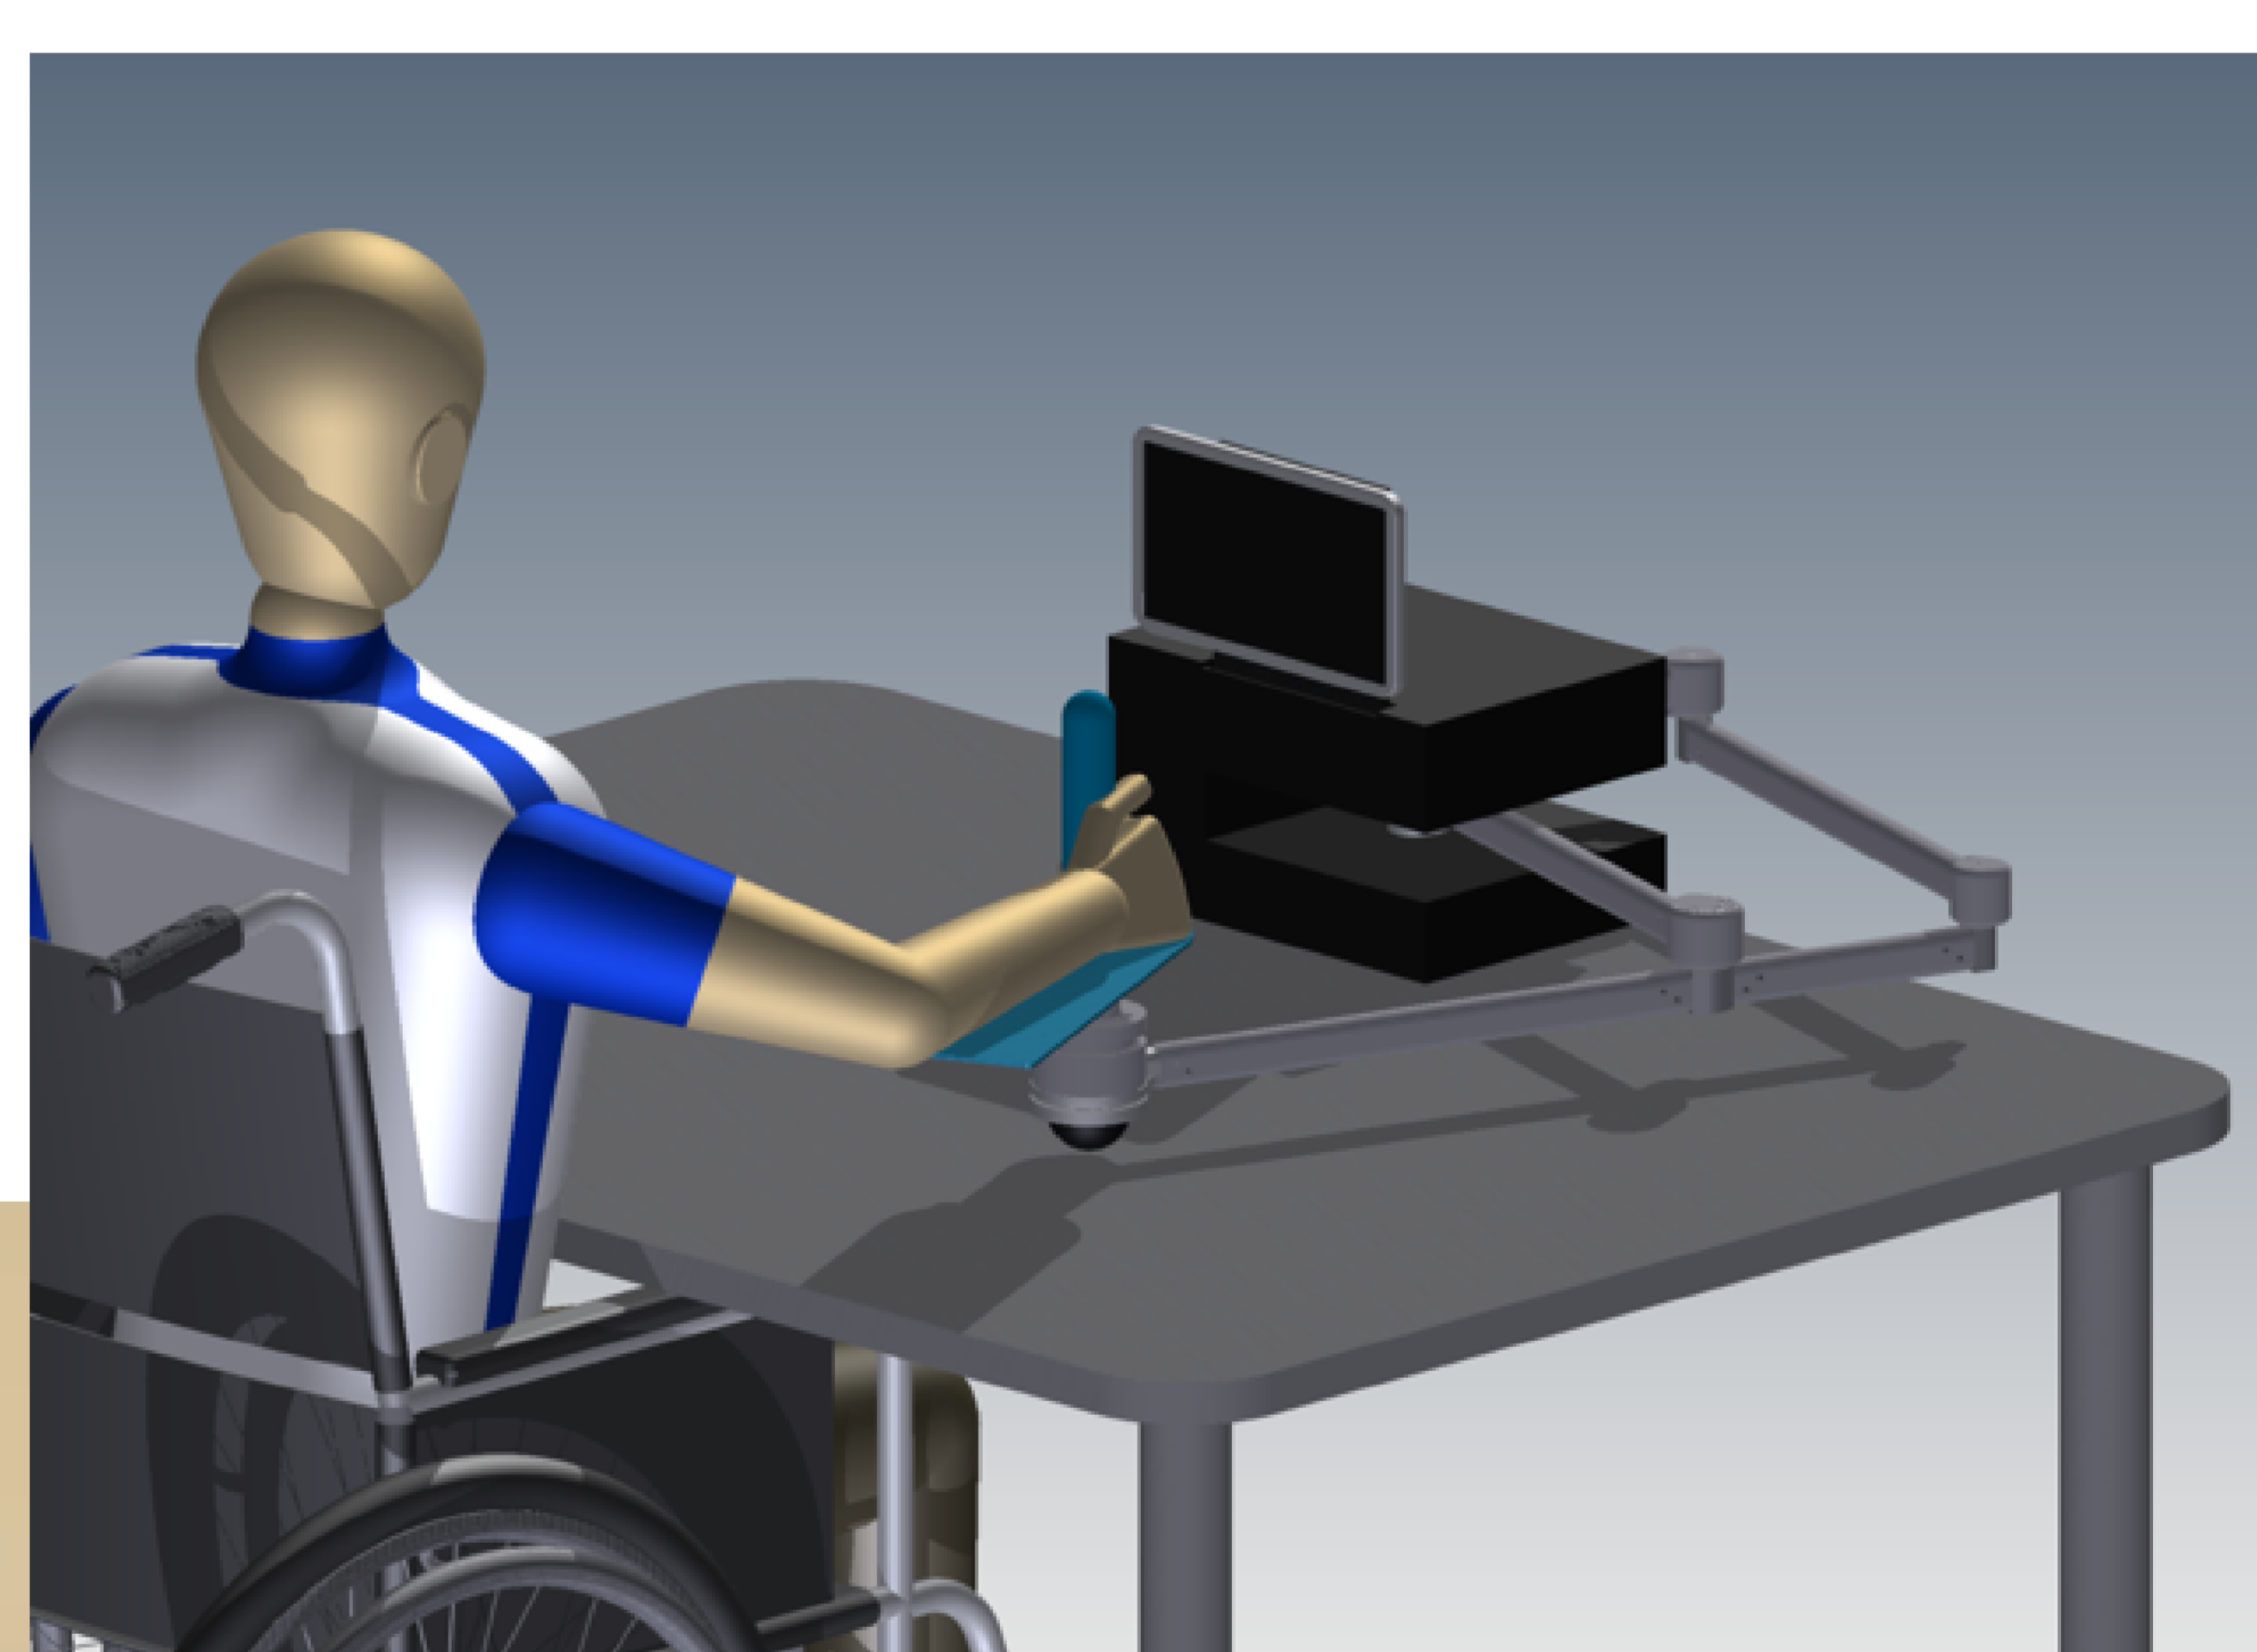

This experiment has been funded by the European Union's FP 7 Research and Innovation Programme under Grant Agreement No. 601116

HOMEREHAB aims at developing a new tele-rehabilitation robotic system for delivering therapy to stroke patients at home.

- 1** A proof-of-concept prototype will be developed based on the RoboTherapist 2D robotic system manufactured by Instead Technologies.
- 2** HOMEREHAB will monitor the patient's physiological state at home and develop adaptive therapies based on such information.
